

AI Radar - daily digest

Friday, 2026-07-03 - 26 article(s) scoring >= 50

1. [98] NousResearch / hermes-agent

GitHub Trending - 2026-07-03 00:27 - ~15 min read

Hermes-agent is a self-improving AI agent that can be run on various platforms, including a \$5 VPS, GPU cluster, or serverless infrastructure, and it supports multiple LLM providers and models. You can interact with it through a terminal interface, Telegram, Discord, Slack, WhatsApp, Signal, or CLI, and it has features like autonomous skill creation, scheduled automations, and delegates and parallelizes tasks. The agent also has a closed learning loop, allowing it to improve itself over time.

Why: You'll be interested in hermes-agent because it's a novel, open-source AI agent that supports multiple LLM providers and models, and has a range of features that make it a powerful tool for AI workflows and automation

Tags: LLM, AI Agent, Self-Improving AI, Automation

<https://github.com/NousResearch/hermes-agent>

2. [95] DeepSeek-V4 Preview is officially live & open-sourced!

r/DeepSeek - 2026-04-24 04:50 - ~10 min read

The DeepSeek-V4 preview is now live and open-sourced, offering two models: DeepSeek-V4-Pro with 1.6T total parameters and DeepSeek-V4-Flash with 284B total parameters. You can try them out at chat.deepseek.com or access the API, with a tech report and open weights available on Hugging Face. This release is notable for its cost-effective 1M context length and performance rivaling top closed-source models.

Why: This matches your interests because it's a significant update to an existing open-source model, with notable improvements in performance and efficiency, and is directly relevant to your work in AI/MLOps

Tags: DeepSeek, open-source models, LLM updates

https://www.reddit.com/r/DeepSeek/comments/1su5w0e/deepseekv4_preview_is_officially_live_opensource/

3. [90] anthropics / claude-code

GitHub Trending - 2026-07-03 00:27 - ~10 min read

Claude Code is an agentic coding tool that assists with coding tasks, explains complex code, and handles git workflows through natural language commands. You can install it on your terminal, IDE, or use it on GitHub. The tool extends its functionality with custom plugins and allows for feedback and bug reporting.

Why: This matches your interests because it's a notable model/product release from a major lab, Anthropic, with potential to improve your AI workflows and productivity as an AI/MLOps engineer

Tags: AI coding tools, Anthropic, Claude Code

<https://github.com/anthropics/claude-code>

4. [90] langflow-ai / langflow

GitHub Trending - 2026-07-03 00:27 - ~10 min read

Langflow is an open-source platform for building and deploying AI-powered agents and workflows, offering a visual authoring experience, API and MCP servers, and support for major LLMs and vector databases. You can use it to create custom AI tools and integrate them into applications. The platform provides a range of

features, including a visual builder interface, source code access, and multi-agent orchestration.

Why: This matches your interests because it's a new open-source tool for AI workflow development and deployment, which could improve your productivity as an AI/MLOps engineer

Tags: AI workflow, Langflow, MLOps tools

<https://github.com/langflow-ai/langflow>

5. [90] Stop Building Fake Employees. Automate the Work You Hate.

r/AI_Agents - 2026-07-02 14:47 - ~15 min read

This post discusses the common pitfalls of building AI agents, specifically the tendency to try to replace entire teams or functions, and instead advocates for a narrower approach, focusing on automating specific, painful, and repeatable tasks. The author suggests that agents are most successful when they are built around clear inputs, outputs, and evaluation criteria, and provides examples of how this approach can be applied. By starting with a narrow scope, agents can be more effective and trustworthy, and can ultimately be expanded to take on more complex tasks.

Why: You'll appreciate this post because it offers practical advice on how to build effective AI agents, which aligns with your interests in AI engineering and workflow automation

Tags: AI Agents, Automation, Workflow Optimization

https://www.reddit.com/r/AI_Agents/comments/1ulkc5n/stop_building_fake_employees_automate_the_work/

6. [90] AI models are vanishing without a trace and nobody is talking about it (24-month study on DeepSeek, Claude, Gemini and GPT)

r/DeepSeek - 2026-07-02 12:44 - ~10 min read

A 24-month study on AI models like DeepSeek, Claude, and GPT reveals a pattern of models disappearing or being updated without transparent explanations, with the author arguing this is a depoliticization mechanism that leaves users and companies in the dark. This study may matter to you because it highlights the lack of transparency in AI model development and deployment. The full paper is available on Zenodo for further reading.

Why: You care about understanding the development and deployment of AI models, and this study sheds light on a concerning trend of opacity in the industry

Tags: AI model transparency, DeepSeek, Claude, GPT, AI governance

https://www.reddit.com/r/DeepSeek/comments/1ulh964/ai_models_are_vanishing_without_a_trace_and/

7. [90] Built a no-API automation that runs 50+ X/Twitter accounts 24/7 (Puppeteer)

r/Automation - 2026-07-02 12:29 - ~10 min read

You're looking at a Reddit post about building a no-API automation that runs 50+ X/Twitter accounts 24/7 using Puppeteer, where the author shares lessons learned from scaling this project, including handling concurrency, session management, and DOM churn. The author also asks for advice on handling Chromium memory and proxy rotation. This post may be of interest to you because it discusses practical challenges and solutions in automation and browser manipulation.

Why: This post matches your interests because it discusses a real-world automation project with Puppeteer, covering technical challenges and solutions that are relevant to your work in AI/MLOps and automation

Tags: Puppeteer, automation, browser manipulation, scalability

8. [90] Talking with Gemma 4 31B!

r/LocalLLaMA - 2026-07-02 12:29 - ~5 min read

This Reddit post discusses a demo of a voice pipeline using Gemma 4 31B, Nvidia's Parakeet, and a custom Qwen3TTS inference, all of which are open-source and can be run locally or in the cloud. You may find this interesting because it showcases a potentially powerful and flexible alternative to proprietary APIs. The demo is fully open-source and has been tested on various hardware configurations.

Why: This matches your interests because it involves open-source models, custom inference, and a drop-in replacement for proprietary APIs, which could be useful for your work as an AI/MLOps engineer

Tags: Gemma, open-source, LLaMA, voice pipeline

https://www.reddit.com/r/LocalLLaMA/comments/1ulgwld/talking_with_gemma_4_31b/

9. [90] A Two-Stage Chain-of-Thought Prompt Architecture for Resume Gap Analysis

r/PromptEngineering - 2026-07-02 11:57 - ~15 min read

This post introduces a two-stage chain-of-thought prompt architecture for resume gap analysis, which enforces structured reasoning before generation, and provides a detailed example of how to implement this approach. The architecture consists of two stages: a gap analyzer that identifies missing or underrepresented keywords and experience modules that need rewriting, and a targeted rewrite stage that incorporates the identified missing keywords naturally. You can apply this approach to improve your resume writing tasks by decoupling analysis from generation and avoiding the hallucination/polishing trap.

Why: This matches your interests because it discusses a novel method for LLM inference and fine-tuning, specifically for resume gap analysis, and provides a detailed example of how to implement this approach.

Tags: LLM inference, fine-tuning, chain-of-thought prompting, resume gap analysis

https://www.reddit.com/r/PromptEngineering/comments/1ulg6in/a_twostage_chainofthought_prompt_architecture_for/

10. [90] Senior SWE-Bench: open-source benchmark that assesses agents as senior engineers

Hacker News - 2026-07-02 11:55 - ~10 min read

Senior SWE-Bench is an open-source benchmark that evaluates agents as senior software engineers, with tasks that reflect realistic instructions and require investigation and debugging. This benchmark assesses agents' ability to build features and solve bugs without over-specified requirements. The leaderboard shows the performance of various models, including Claude and GPT, on these tasks.

Why: You'll be interested in Senior SWE-Bench because it provides a new way to evaluate the capabilities of agents as senior engineers, which aligns with your interests in LLM inference, fine-tuning, and agent development

Tags: LLM benchmark, agent development, software engineering

<https://senior-swe-bench.snorkel.ai/>

11. [90] In practice, our multi-agent failures were almost never the model - they were the handoffs. Does the MAST data match what you see?

r/AI_Agents - 2026-07-02 08:41 - ~8 min read

This post discusses the challenges of building multi-agent pipelines and how failures are often due to handoffs between agents rather than the models themselves. The author references the Berkeley MAST paper, which categorizes failures into specification and design, inter-agent misalignment, and verification issues. The author suggests using a dedicated verifier agent to improve pipeline reliability.

Why: You'll find this relevant because it discusses practical challenges and solutions in multi-agent systems, a key area of interest for you as an AI/MLOps engineer

Tags: multi-agent systems, pipeline reliability, LLM

https://www.reddit.com/r/AI_Agents/comments/1ulcleg/in_practice_our_multiagent_failures_were_almost/

12. [90] The agent failure mode no eval catches: acting on a fact that was true when it was cached and wrong when it was used

r/AI_Agents - 2026-07-01 21:35 - ~8 min read

This Reddit post discusses a potential failure mode in AI agents where they act on stale information that was true when cached but is no longer accurate, and how current evaluation methods may not catch this issue. The author frames this as a problem of 'currency' versus 'consistency' and asks for others' approaches to handling it. You may find this relevant because it highlights a nuanced challenge in ensuring AI agents' reliability.

Why: You care about LLM inference and tooling, and this post raises an important consideration for building reliable AI agents that can handle changing information

Tags: AI Agents, LLM Evaluation, Data Freshness

https://www.reddit.com/r/AI_Agents/comments/1uky8x/the_agent_failure_mode_no_eval_catches_acting_on/

13. [90] Getting an LLM agent to actually stay in character, the steering bullseye nobody writes down

r/AI_Agents - 2026-06-28 15:38 - ~10 min read

This Reddit post discusses the challenges of keeping an LLM agent in character, sharing lessons learned from building character-driven agents for a social deduction game. The author highlights several key findings, including the importance of using authoritative mechanisms and strict length caps to steer the character's behavior. You may find this post valuable for its practical insights into LLM agent development.

Why: You care about LLM inference, agents, and tooling, and this post provides actionable advice on keeping agents in character, which aligns with your interests in AI/MLOps and practical engineering

Tags: LLM agents, character development, AI engineering

https://www.reddit.com/r/AI_Agents/comments/1ui0fxx/getting_an_llm_agent_to_actually_stay_in/

14. [85] We synthesized 27 papers on AI agent safety into a citation-backed mindmap

r/AI_Agents - 2026-07-01 20:13 - ~15 min read

A comprehensive mindmap synthesizing 27 papers on AI agent safety, covering attacks like prompt injection and frameworks like TRISM. The content highlights critical vulnerabilities in mainstream agents and benchmark results.

Why: This provides a structured overview of AI agent safety research, including key threats and benchmark performance, which is relevant to your focus on practical engineering and security in AI systems.

Tags: AI_Agents, Security, Benchmarking, Research_Synthesis

https://www.reddit.com/r/AI_Agents/comments/1ukwomj/we_synthesized_27_papers_on_ai_agent_safety_into/

15. [80] I let Fable 5 redesign my landing page and it compiled the whole Rust app to WASM so the app IS the page

r/ClaudeAI - 2026-07-02 07:35 - ~5 min read

This Reddit post discusses how Fable 5 redesigned a landing page for a pixel-art character generator, compiling the Rust engine to WebAssembly and creating a live, interactive office environment that runs in the user's local time. You may find this interesting because it showcases a unique application of AI-generated design and WebAssembly technology. The post includes a link to try out the demo site, which is best experienced at night.

Why: You may be interested in this post because it combines AI, WebAssembly, and Rust, which are all relevant to your interests in AI engineering and novel applications of technology

Tags: AI, WebAssembly, Rust, ClaudeAI

https://www.reddit.com/r/ClaudeAI/comments/1ulbhgh/i_let_fable_5_redesign_my_landing_page_and_it/

16. [80] Stop asking AI to help you think Ask it to disagree with you first.

r/ChatGPTPromptGenius - 2026-07-02 05:33 - ~5 min read

This Reddit post discusses a prompt technique where you ask the AI to disagree with your plan before helping you execute it, which can lead to more honest and useful output. The author suggests using prompts like 'Assume this approach has a serious flaw. What is it?' or 'What would a smart person who disagrees with me say?' to get the model to critique your ideas. You can use this technique to make better decisions in areas like architecture, content strategy, and business logic.

Why: This post matches your interests because it provides a novel and practical technique for improving AI workflows and decision-making, which is directly relevant to your work as an AI/MLOps engineer

Tags: LLM inference, prompt engineering, AI workflows

https://www.reddit.com/r/ChatGPTPromptGenius/comments/1ul9buy/stop_asking_ai_to_help_you_think_ask_it_to/

17. [80] Built a 4-stage content automation pipeline. Refresh went from 14 days to 3. Here's the wiring.

r/Automation - 2026-07-02 03:37 - ~10 min read

You're looking at a 4-stage content automation pipeline that reduced refresh time from 14 days to 3, which is explained in detail with its wiring. The pipeline automates content updates, ingestion, and citation tracking, and its creator is sharing their experience. This pipeline is relevant to your interests in AI and automation.

Why: You care about high-quality engineering write-ups and notable releases, and this post provides a detailed explanation of a content automation pipeline that aligns with your interests in AI and automation

Tags: content automation, pipeline engineering, AI citation tracking

https://www.reddit.com/r/automation/comments/1ul71x8/built_a_4stage_content_automation_pipeline/

18. [80] Kimi K2.7 Code is generally available in GitHub Copilot

r/Kimi - 2026-07-02 03:13 - ~2 min read

The Kimi K2.7 code is now available in GitHub Copilot, allowing users to access and utilize this model. This

may matter to you as it provides an opportunity to explore and work with the Kimi model. The availability of the code in GitHub Copilot can facilitate easier integration and development with the model.

Why: This matches your interests as it involves the availability of a notable open-source model, which could be useful for your work in AI/MLOps

Tags: Kimi, GitHub Copilot, Open-Source Models

https://www.reddit.com/r/kimi/comments/1ul6k08/kimi_k27_code_is_generally_available_in_github/

19. [80] Giving your agent "hands" without handing it the keys to everything - how are you handling it?

r/AI_Agents - 2026-07-02 00:25 - ~5 min read

This Reddit post discusses the challenge of giving AI agents the ability to perform actions without granting them unrestricted access to sensitive resources. The author is developing a solution called CoreSpeed/HaaS, which provides a permission gate and connectors to various tools, allowing for more controlled agent interactions. You may find this relevant as it addresses a key concern in AI agent development.

Why: You are interested in LLM inference, agents, and tooling, and this post explores a crucial aspect of controlling AI agents' actions, aligning with your interests in AI/MLOps and agent development

Tags: AI Agents, LLM Inference, Agent Control

https://www.reddit.com/r/AI_Agents/comments/1ul2yac/giving_your_agent_hands_without_handing_it_the/

20. [80] SWE-rebench leaderboard update: GLM-5.2, Qwen3.6-27B, Qwen3.6-35B-A3B, Gemma 4 31B and more + improved UI

r/LocalLLaMA - 2026-07-01 14:53 - ~5 min read

The SWE-rebench leaderboard has been updated with new models, including GLM-5.2, Qwen3.6-27B, Qwen3.6-35B-A3B, and Gemma 4 31B, and features an improved UI for easier comparison of results. You may find the local and self-hosted model results particularly interesting, as they include models like Qwen3.6-27B, which is strong for its size. The update also invites feedback on which local models to test in the future.

Why: This update matches your interests because it provides new information about open-source models and their performance, which is relevant to your work as an AI/MLOps engineer

Tags: LLM benchmarking, SWE-rebench, open-source models

https://www.reddit.com/r/LocalLLaMA/comments/1uknx14/swerebench_leaderboard_update_glm52_qwen3627b/

21. [80] Open-sourced the Chromium build we use for agent browsing

r/AI_Agents - 2026-06-28 20:19 - ~3 min read

This post announces the open-sourcing of clark-browser, a patched Chromium build designed to improve stability for browser-based agent workflows. You may find this useful for building more reliable agents, as it addresses common browser issues that can cause agent failures. The project's creator is seeking feedback on how to make it more useful.

Why: This matches your interests because it involves open-sourced tools and libraries that can improve AI workflows, specifically for agent browsing and browser-based agent workflows

Tags: AI Agents, Open-Source, Browser Stability

https://www.reddit.com/r/AI_Agents/comments/1ui7n02/opensourced_the_chromium_build_we_use_for_agent/

22. [80] Are we focusing too much on models and not enough on agent infrastructure?

r/AI_Agents - 2026-06-28 18:39 - ~5 min read

This Reddit post discusses the challenges of building agent systems, highlighting that the hardest parts often have little to do with the model itself, but rather with infrastructure and tooling. You may find this post relevant as it touches on the importance of agent infrastructure, a crucial aspect of AI systems. The post sparks a discussion on the biggest bottlenecks in practice and potential breakthroughs in agent systems.

Why: This post matches your interests because it focuses on the practical aspects of building AI agent systems, discussing infrastructure and tooling, which are crucial for AI/MLOps engineers

Tags: AI Agents, Infrastructure, MLOps

https://www.reddit.com/r/AI_Agents/comments/1ui51wm/are_we_focusing_too_much_on_models_and_not_enough/

23. [80] OpenAI GPT 5.6 Sol Terra and Luna Limited Preview

r/AICuriosity - 2026-06-27 03:46 - ~2 min read

This post discusses OpenAI's limited preview of three new models in the GPT 5.6 family: Sol, Terra, and Luna, each with different strengths and use cases. You may be interested in this update as it pertains to the latest developments in open-source models and their applications. The models are currently only accessible to a small set of trusted partners and teams connected to the US government, but OpenAI plans to open them up to more users in the coming weeks.

Why: You're interested in updates about existing or new open-source/open-weight models and their applications, which makes this announcement about OpenAI's GPT 5.6 models relevant to your work

Tags: GPT 5.6, OpenAI, LLM Updates

24. [70] Fable 5 Returns to Claude With Updated Cybersecurity Safeguards

r/AICuriosity - 2026-07-02 01:55 - ~2 min read

This post discusses the return of Fable 5 to Claude with updated cybersecurity safeguards after a pause in mid-June. The new safeguards may flag a higher share of normal requests, which will be routed to Opus 4.8. You may be interested in this update as it affects the usage of Fable 5, especially if you are a paid user.

Why: You care about updates on existing models like Fable 5 and Claude, and this post provides information on the updated cybersecurity safeguards and their impact on usage

Tags: Fable 5, Claude, Cybersecurity, Model Updates

https://www.reddit.com/r/aicuriosity/comments/1ul4waa/fable_5_returns_to_claude_with_updated/

25. [50] AI can't be listed as inventor on patent applications, Japan's top court rules

Hacker News - 2026-07-02 22:43 - ~3 min read

Japan's top court has ruled that AI cannot be listed as an inventor on patent applications. This decision may impact how AI-generated innovations are protected and credited. The ruling is a significant development in the intersection of AI and intellectual property law.

Why: You may be interested in this ruling as it affects the legal landscape surrounding AI innovations and patent applications, which is relevant to your work in AI/MLOps

Tags: AI law, patent law, Japan

26. [50] Is there platform lets me chat with different LLMs with long term memory in between chats

r/AI_Agents - 2026-07-02 08:08 - ~2 min read

This Reddit post asks about a platform that allows chatting with different large language models (LLMs) while maintaining long-term memory between chats. You may be interested in this because it discusses the need for a unified platform to interact with multiple LLMs. The post mentions specific models like Fable and GPT 5.5.

Why: You might find this relevant because it touches on the topic of LLM interaction and the desire for a more seamless experience across different models

Tags: LLM, Chat Platforms, Long-term Memory

https://www.reddit.com/r/AI_Agents/comments/1ulc1bp/is_there_platform_lets_me_chat_with_different/
